

## Fast Response Craft Simulators

MissionQuest is a fast response craft (FRC) simulator that allows crews to prepare for operations too difficult or too dangerous to replicate using on-water training. MissionQuest combines breathtaking visual realism, high-fidelity maneuvering performance and total situational control to deliver a safe, focused FRC training environment.

The specific training elements delivered by MissionQuest include: basic skills training, positive control, search and rescue operations and tactics, and interdiction.

By incorporating MissionQuest into FRC training programs, organizations are able to:

- ▶ Increase training frequency and focus
- ▶ Mitigate training and operational risk
- ▶ Reduce training costs
